

Why don't people share knowledge?

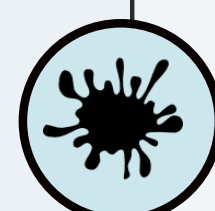

Don't want a mistake to be found

Don't want to be scooped

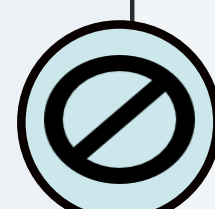

Not enough time

Data is messy, needs to be formatted and made presentable

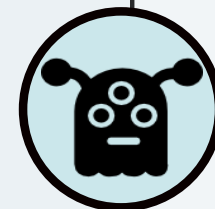

Don't have a way to share data!

Aren't allowed to share data (private patient information, permissions etc)

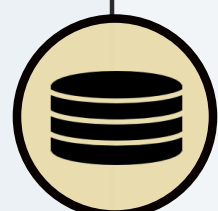

Don't have the data any more

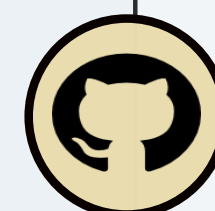

Don't want the data to be misused.

How can scientists share knowledge?

Share their data. e.g in public data repositories

Share their code, e.g in open source repositories such as github

Use standard data formats

Publish in "open-access" journals

Use open source software!

Communicate through social media, e.g. Twitter
