

Sharing Data Is Important

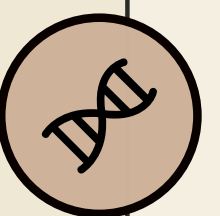

Sharing Data Saves Lives

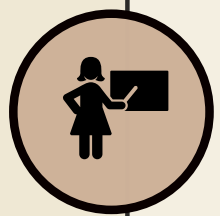

Research publications, protocols and methods and data available to be utilised by others

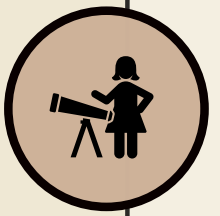

New ways to collaborate, internationally too!

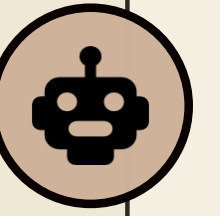

Reproducibility of research results

Semantic Interoperability (Using the same terms to mean the same thing)

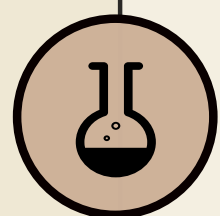

Reduces fraud

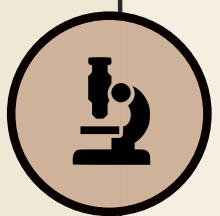

Increased profile of researcher who created dataset

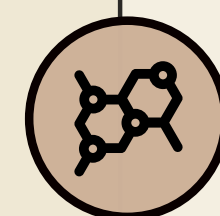

Active scientific debate created

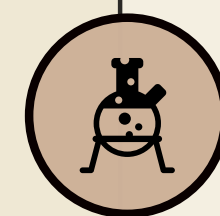

Cultural changes towards openness changes ways of doing science

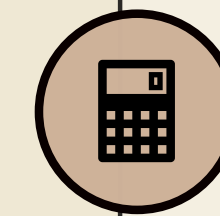

New research ideas are born

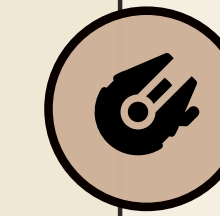

New research made possible by existing data sets

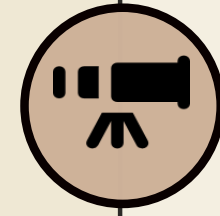

Publications advance research activities elsewhere.

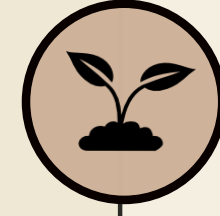

Faster validation and verification of results possible

Increased impact of science

Increased profile of subject area

Citizens' trust in science increased
